

**Pic2Mag's Software Privacy Statement**  
**By Michael Snyder**  
**03/09/2020**

**What information is collected and how?**

**Pic2Mag software does not collect any intentional information from its users.** The program is designed to either allow a user to draw an image or to load an image file from a local file system and the process the image, then ask for a filename and save a set of images to the pictures directory.

While it possible future versions of Pic2Mag software will send images (of user drawn magnet arrays) to a central location for faster processing; present software has no internet usage nor of any kind. The program is literally a graphical user interface tied to an image processing library. **Neither part of the program uses internet resources.**

In other words, when Pic2Mag software runs, from the software's viewpoint all resources are local on the device and there is no remote communication of any kind.

**How is the information used?**

No intentional information is collected from users. None. I say intentional because the internet store that you bought the Pic2Mag software from has a different Privacy policy and makes general sales reports and other generic business analytics available to the authors of the software.

**It is the policy of the Pic2Mag business not to collect personal information from users and the present software has no programmed capacity to do so.**

**How is the information stored and protected**

No personal information is collection hence, there is no need to store it. The information is protected by not collecting it.

**Company contact information**

Pic2Mag software is a department of Revolution-Labs. The owner of the business is the author of the software.

### **Use of cookies, log files and tracking**

There are no cookies, log files, nor tracking capacity within Pic2Mag software. Any debugging (crash) logs on a user's device stays on a user's device.

At this time, the Pic2Mag website does not use cookies, and the website provider does collect basic http ip address information as is a common security practice for websites.

### **How a user can opt out of data collection/usage.**

**No need to opt out of data collection, there is no intentional data collection nor capacity within Pic2Mag software.** The Pic2Mag software is not programmed to collect data in any form nor function, other than accepting file names for naming new files within a local file system.
